HTML • CSS • JavaScript • Web APIs • Third Party APIs • Server Side APIs • NodeJS • Object-Oriented Programming • Express

Safe Trip Planner
HTML • CSS • JavaScript

Website that allows the user to see in one glance the most essential information about a country they are interested in traveling to. The user will get the basic information of a country, the exchange rate between the country's currency and USD and will also get information about the current covid levels in their target country without having to search in different sites.

https://josevidmal.github.io/u7-project1-team4/

Weather Dashboard
HTML • CSS • JavaScript

Application that allows the user to search a city and obtain the current weather conditions as well as a 5-day forecast with data obtained from the OpenWeather API so the user has information about the temperature, wind speed and humidity.

https://dinoabrego.github.io/weather-dashboard/

Day Scheduler
HTML • CSS • JavaScript

Simple application that allows the user to plan their work day. The user can input their activities by each hour from 9 to 5 and then click save and have them stored in local storage. Allows the user to see at first glance if an activity has passed, is active or is coming by showing hours in a past, present and future color coding.
